# PERFORMANCE

DX225LCA

The performance of the DX225LCA has a direct effect on its productivity. Its new improved engine and new e-EPOS controlled hydraulic system have combined to create an unbeatable hydraulic excavator, with a cost/performance ratio that makes the DX225LCA even more appealing.

## DOOSAN DB58TIS ENGINE

At the heart of the hydraulic excavator is the improved DOOSAN DB58TIS engine. It is combined with the new e-EPOS electronic control system, for optimum power and fuel saving.

- Better performance by improved engine
- Energy efficiency reduces fuel consumption

### 1 Hydraulic Pump

The Main pump has a capacity of 2x206.5 l/min reducing cycle time while a high capacity gear pump improves pilot line efficiency.

### 2 Swing drive

Shocks during rotation are minimized, while increased torque is available to ensure rapid cycles.

### 3 Travel device

New design travel device gets more performance by improving efficiency and simplification of the internal structure.

## EXCAVATOR CONTROL

### New e-EPOS system (Electronic Power Optimizing System)

The brains of the hydraulic excavator, the e-EPOS, have been improved, through a CAN (Controller Area Network) communication link, enabling a continuous exchange of information between the engine and the hydraulic system. These units are now perfectly synchronised.

The advantages of the new e-EPOS impacts at several levels, Ease of operation and user-friendliness:

- The availability of a power mode and standard mode guarantee maximum efficiency under all conditions.
- The automatic deceleration mode enables fuel saving.
- Regulation and precise control of the flow rate required by the equipment are available as standard.
- A self-diagnosis function enables technical problems to be resolved quickly and efficiently.
- An operational memory provides a graphic display of the status of the machine.
- Maintenance and oil change intervals can be displayed.

# RELIABILITY

DX225LCA

The reliability of an item of plant contributes to its overall lifetime operating costs. DOOSAN uses computer-assisted design techniques, highly durable materials and structures then test these under extreme conditions.

Durability of materials and longevity of structures are our first priorities.

### Strengthened Boom

The Shape of the boom has been optimized by finite elements design, allowing the loads to be better distributed throughout the structure. This combined with increased material thickness means improved durability and reliability by limiting element fatigue.

### Arm Assembly

In the arm assembly greater strength has been gained by using cast elements and reinforcement around the bosses to give it an increased lifetime.

### X-chassis

The X-chassis frame section has been designed using finite element and 3-dimensional computer simulation, to ensure greater durability and optimum structural integrity. The swing gear is solid and stable.

### D-type Frame

The D-type frame and chassis frame add strength and minimize distortion due to shocks.

### Sintered Bushing

A highly lubricated metal sintered bushing is used for all front pivot points in order to increase the lifetime and durability. Extend the greasing intervals to 250 hours.(except buck)

### Ultra-hard wear-resistant disc

New materials have been used in order to increase the wear resistance and to increase the service intervals. The longevity is greatly increased by the addition of wear plates on the inside and outside of the bucket lugs.

### Integrated Track Spring and Idler

The track spring and the idler have been joined directly to achieve high durability and improved maintenance convenience.

### Tracks

The chain is composed of self-lubricating sealed links isolated from all external contamination. The tracks are locked by mechanically bolted pins.

### Polymer shim

A polymer shim is added to the bucket pivot to maintain precise control over the equipment.

# MAINTENANCE

DX225LCA

Short maintenance operations at long intervals increase the availability of the equipment on site. DOOSAN has developed the DX225LCA with a view to high profitability for the user.

**Engine oil filter**  
The engine oil filter offers a high level of filtration allowing the oil change interval to be increased to 500 hours. It is easy to access and is positioned to avoid contaminating the surrounding environment.

**Easy maintenance**  
Access to the various radiators is very easy, making cleaning easier. Access to the various parts of the engine is from the top and via side panels.

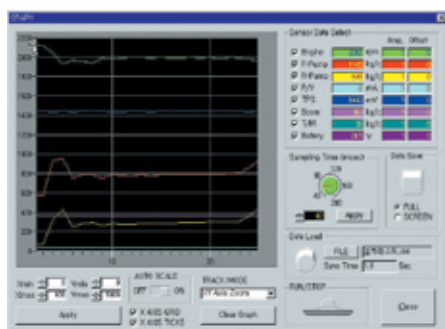

**Hydraulic oil return filter**  
The protection of the hydraulic system is made more effective by the use of glass fiber filter technology in the main oil return filter. This means that with more than 99.5% of foreign particles filtered out, the oil change interval is increased.

**Air cleaner**  
The large capacity forced air cleaner removes over 99% of airborne particles, reducing the risk of engine contamination and making the cleaning and cartridge change intervals greater.

**Water separator**  
High efficiency and large capacity water separator protect the engine by removing most moisture from the fuel.

**PC Monitoring (DMS)**  
A PC monitoring function enables connection to the e-EPOS system, allowing various parameters to be checked during maintenance, such as pump pressures, engine rotation speed, etc. and these can be stored and printed for subsequent analysis.

**Convenient Fuse Box**  
The fuse box is conveniently located in a section of the storage compartment behind the operator's seat providing a clean environment and easy access.

**Centralized grease inlets for easy maintenance**  
The arm grease inlets are grouped for easy access.
